

LANmark-OF Demarcation Boxes

LANMARK-OF DEMARCATION BOX 12 CORE MULTIMODE WHITE

Aginode Ref: N521.621

- Left or right mounting options
- 6 duplex LC adapters
- Secure accommodation of splice cassettes (not included)
- Lockable patching area with management ring
- Port identification
- Robust steel construction

The Demarcation Box is a robust yet lightweight, cost effective solution for the break-out and termination of extractable bundle cables in FTTO implementations. The box is symmetrical allowing mounting with the LC adaptors facing right or left and features a “hook and staple” locking feature which can be used with a padlock (not supplied), a wire tie seal or simply a plastic cable tie to prevent access to the patching area.

The Demarcation Box is packed in an environmentally friendly cardboard box and comes with a patch cord management ring and the screws necessary to fasten a splice cassette.

The new box is compatible with the standard Aginode splice cassettes (N890.095 - heat shrink or N890.096 – alu protect) and cover (N890.097) which can be ordered separately.
