The Aginode Fibre Trunking System provides a dedicated pathway through data centre spaces and IT facilities for routing fibre cables.

The rigid channel with matching cover protects fibre optic cables from damage.

All components of the system are made of tough, fire retardant materials.

The system components have a smooth inner surface to ensure a safe path for fibre optic cables and feature internal radius management to facilitate the maintenance of bend radii for cables and patch cords.

The Trumpet is used to provide an exit from 120mm(4.75 inch) channels whilst maintaining fibre bend radii.

All components of the system including the covers can be installed and uninstalled without special tools.
